

# AUDIT

# VisiCon

The AUDIT – system offers a standardized solution of sophisticated VisiCon - headlamp aiming technology for the use in vehicle production facilities. Fields of application are manual and semi-automatic headlamp aiming. It can be applied as stand-alone system (with optional centralizer) as well as in combination with a wheel alignment machine.

## Equipment

- Touchpanel as user interface
- Positioning system, floor mounted or as portal with markers for setting positions
- Light collecting box with CCD-camera and large Fresnel lens
- Software for adjusting of all headlamp types with state-of-the-art technology

## Software (WINDOWS XP® based)

- Pre-settings for all headlamp types
- Manual selection of vehicle types by means of the touchpanel
- Operator guide with the monitor
- Error messages in clear text
- Data storage on local harddrive
- Laser calibration function (Laser optional)

## Options

- up to 4 powertools
- Automatic lock of the light collecting box in the setting position
- Pneumatic centralizer (height approx. 65 mm)
- Light collecting box for Advanced Frontlighting Systems
- Operator monitor (in addition to Touchpanel)
- Air conditioner for electrical cabinet
- Communication with superordinated systems
- Barcode reader
- Calibration laser
- Protocoll printer
- Modem for remote maintenance
